JH3COMPANY.COM

No waterproofing job is too complex for us to handle. So don't worry whether your building uses a variety of finishes or substrates, JH3 Company knows how to use a combination of waterproofing methods and installations for any such construction design.

ABOVE GRADE

Add longevity and durability to above grade structures, above ground or fully exposed, by having its surface waterproofed so moisture does not penetrate inward.

- Decks
- Patios
- Balconies
- Verandas
- Driveways
- Ramps
- Stairs
- Walkways
- Parking Garages
- Roofs
- Plazas
- Swimming Pools

Every surface can benefit from above grade waterproofing so it is ultraviolet and corrosion resistant, and capable of handling thermal strains, temperature swings, foot and traffic exposure.

BELOW GRADE

Stop the transmission of water through concrete and corrosion of reinforcing steel by having below grade structures underground waterproofed.

- Parking Garages
- Elevator Pits
- Basements
- Foundation Walls
- Retaining Walls
- Slabs
- Footings
- Stairs
- Planters

Whether the structure is residential or commercial, its surface will benefit from below grade waterproofing when dealing with negative side waterproofing or positive side waterproofing.
